

ABSTRACT

A method, apparatus, and system are provided for a visual administrator providing Java management bean (MBean) support. According to one embodiment, a representation of a plurality of MBeans is displayed on a graphical user interface of a computing device. One of the plurality of MBeans may be selected with the graphical user interface. In an embodiment, an attribute of the selected MBean is accessed with the graphical user interface. In an embodiment, an operation of the selected MBean is invoked with the graphical user interface.
